

## DISLIKE REPORT ON ARIZ. FIELD

**Tucsonians Think Texas Oil Experts Prejudiced Against Them.**

Tucson, Ariz., June 2.—Complaint has been made around the chambers of commerce that certain geologists and experts of Texas oil companies have combined in disparagement of the several oil fields that have been staked out for development in the vicinity of Tucson. The question has been considered at a meeting, where Capt. Wm. McDermott, T. E. Richer and others defended the local propositions as of merit.

R. O. Whymish, a Los Angeles engineer and geologist, has made announcement of his belief in the existence of an oil pool in the Santa Cruz valley, from ten to 15 miles southeast of Tucson. He found oil shale and oil sands under the Pinal and Catalina mountains and in the Pinaleno range. He believes that the best point for drilling would be between the Pinaleno section and the Catalina range.

Though the stock of the Catalina Oil and Gas company is off the market, it is held there by an abundance of interest in the Catalina oil field. The Catalina oil field is a large area of land, some of which is owned by the university, that an oil exists near Tucson. The Catalina oil field is a large area of land, some of which is owned by the university, that an oil exists near Tucson.

## TO SINK WELLS IN RUINELSCO.

**Companies Make Locations Preparing for Drilling Campaign.**

San Antonio, Texas, June 2.—The Winters Oil and Gas company has put up its derrick on the Lee Sals place, east of the Higginson well. The company is now waiting on the arrival of machinery. The Winters company will also sink a well on the Johnson tract in the same vicinity.

The San Diego and Texas Oil company is sinking a well on the Johnson tract in the same vicinity. The company is now waiting on the arrival of machinery. The San Diego and Texas Oil company will also sink a well on the Johnson tract in the same vicinity.

## BIG WELL PAYS IN SPINDLETOP

**Clouded Titles Retard the Development of the Promising Section.**

Baumont, Texas, June 2.—With the coming in of the deep test in Spindletop a few days ago there has come a new and rapid development. Interest in it is at its highest and oil men seek eagerly for some tract of the precious golden sands. The Gulf company, which brought in the first deep test of Spindletop, is making a new location southeast of McFarland No. 1, and may test out 100 feet of land in this immediate vicinity.

Although a number of surveys have been working in the vicinity of the new well none of the parties interested are yet able to give out any definite plans because of the many clouded titles. The property has been transferred to the Gulf company, but the titles are not yet cleared up.

## 14 NEW WELLS AT SWEETWATER

**Many Projects Started in Territory Showing Big Oil Indications.**

News from Sweetwater, Texas, is to the effect that in that section there are four wells actually drilling, four with machinery on the ground and ready to begin drilling, six wells contracted for and contracts pending for two more. The names of these contracts and the status of their operations are as follows:

The West Texas Development company is drilling at 1200 feet near Blackwell. The Sweetwater Oil and Gas company is drilling at 400 feet in the southwest part of the county on the Chaslin and Allen block.

## INVESTIGATING FAKE OIL COMPANIES IN NEW YORK

A New York dispatch says some oil companies selling stocks to the public on the curb, by mail and through personal solicitation, have notified the committee of the recently formed oil companies. The committee is being investigated by John T. Dunlop, assistant district attorney, and R. T. Kilgore of the bureau of commercial frauds.

It is said that the evidence thus far discovered shows many concerns of which the general newspaper (publishing public has never heard) are being sold through the so-called "snake" lists of fly-by-night promotion houses.

The vigilance committee of the Associated Advertising clubs of America made public its report on the advertising of the recently formed oil companies. While the committee finds that some of the companies have real merit, it also finds that some of them are deceptive.

## "Honesty Safety and Service"

**"Take My Advice—BUY SAM DREBEN Petroleum at \$1.00 And Share in The Riches That Are Sure to Come"**

M. P. CARLOCK. WE recommend SAM DREBEN PETROLEUM OF BURKBURNETT AT \$1.00 because we believe absolutely that CUSHERS are CERTAIN. Wanted: Expert Sales People.

BURKBURNETT YIELDS 75,125 BARRELS A WEEK.

Whitely Falls, Texas, June 2.—Production of last week in the Burk Burnett field per day averaged 75,125 barrels. This does not include the big well which came in Thursday and Friday as they were not connected to the pipe line in time for last week's test.

Of the 75,125 barrels, 62,000 is credited to the immediate Burk Burnett well; 12,000, Patoka, 900 barrels; town Park, 115 barrels; and Patoka, 300 barrels.

SOUTHLAND DOUBLES FLOW WHEN IT GOES FOOT DEEPER.

The Southland Oil company's well east of Gorman, Texas, is reported as now making around 1000 barrels. The report says that it doubled its flow on being drilled a foot deeper into the sand.

OKMUI GEE COUNTY IS DEVELOPING GOOD WELLS.

Tulsa, Oklahoma, June 2.—Considerable developing is being done by the Rockwell Oil company (Dix and Mandarini) which made a number of excellent completions recently. This company has just completed its test on the Manda Harrison land, in the southwest quarter of section 10-10-13, west of Bogue in Oklahoma county. The test is making 216 barrels from a sand topped at 1350 feet. Located on the Phillips land, the southwest quarter of section 10-10-13, in the same district the company has a 20 barrel well in the same sand.

A. Russ and others got pay sand in their second test in section 10-10-13, west of Bogue. This well is good for 100 barrels of oil at 2250 feet.

When Jennie Shuler and others brought in their 20 barrel well their seventh completion on the Phillips land, in the southeast quarter of section 22-10-13, Cowata district, southeast of Bogue in Wagoner county and others have drilled on with more vim. Their same parties have a 40 barrel well on the Atkins land in section 22-10-13, same district.

**SENATOR BENNETT TO TAKE FLYER IN TEXAS**

Senator Wm. R. Bennett, who was a candidate for mayor of New York at the recent election, and associates, have acquired leases on part of the James W. Knox ranch, five miles east of Jacksonville, Jacksonville county, Texas. A test well is to be sunk in during June, it is said.

**WATER WELL SHOWS OIL.**

Stockdale, Texas, June 2.—For a great many years Stockdale and its vicinity have had showings of oil but little has been done toward the development of the district. Many water wells drilled in a shallow depth have been abandoned because oil accumulated on top of the water. Several wells are in and about town where oil is showing at about 100 or 150 feet. The oil is considered very high grade.

Sixty years ago with the hope of finding an artesian well, H. H. Palm built a well on his farm one mile from town, but it failed to find oil and the water. Now the oil is showing in this well at 50 feet and is high grade. It has not yet been tested, but what capacity this well has not just what it will do.

Now with the hope of learning just what the wealth of this community may be in oil, companies are being formed to test out the water well. Among these is the Palm Creek oil company now drilling about five miles north of town.

**SHALLOW WELL FLOWS.**

Whitely Falls, Texas, June 2.—The Burk Burnett-Vanderhoof company has a well on the H. N. Ferguson tract, in the town Park shallow sand, which is now flowing. The drill was 100 feet in the sand at 300 feet. It promises a daily production of about 100 barrels. This is of interest to all oil men of this section as this sand is a new producing sand.

**DUNTER AT 1075 FEET.**

The Collins County Oil company has abandoned its well on Block 15 southeast of Burk-Wagoner well in the Burk Burnett field, Whitely county. The depth made before abandonment as a "duster" was 1075 feet.

**41 COMPLETIONS IN WEEK.**

Burkburnett field in Whitely county, showed up with 41 completions last week with flow of 1000 barrels. The estimated flush production of 25 of these producers is given at 11,000 barrels.

**BURKS-FORT WILL BE FINISHED.**

Leaky casing in the Burk Burnett well in the Burk Burnett field in Whitely county, is being caulked off after which the well will be finished.

**OVERLOOK TO GO TO OIL FIELDS.**

L. J. Overlook will leave this evening for a trip through the Texas oil fields. He has recently returned from El Paso.

**THE CRY OF THE WEAK.**

Quota of the Unique Friday-Adv.

### The Billion Dollar Oil Field

If you do not appreciate what it means to develop an OIL FIELD, read this clipping from the El Paso Herald of May 30, 1919:

**The Greatest Gain From Oil Land In History**

Texas & Pacific Company At Ranger Breaks All Established Records.

Dallas, Tex., May 28.—Three hundred million dollars is the value of 20,000 acres of land within five miles of Ranger, given to the Texas & Pacific Oil Co. two years ago, provided the company would sink four test wells on it.

This is the greatest money making test in the history of the Texas oil field.

The Burk-Wagoner deal and Joe Duker's wealth are trifles compared with this stupendous development. The first two wells of the four tests were producers. One of the tests was the wonderful McKinley well, now attracting interest over all the United States.

When the Texas & Pacific Oil Co. took over the land under the agreement, it was just beginning in the oil game. The company is now the Texas & Pacific Oil and Gas Co. Many wells have been drilled on the land, proving the territory to be worth the amount stated, and the development continues. Its worth will slowly creep to \$1,000,000,000.

If we bring in an oil well we develop an OIL FIELD—possibly a Billion Dollar Field. Your investment will share pro rata in all profits that may come to this Company.
